

THE THREE LEVELS OF ARTIFICIAL INTELLIGENCE

From specialized systems to hypothetical beyond-human intelligence

01

ANI

Artificial Narrow Intelligence

SPECIALIZED

Performs a specific task or a limited set of tasks extremely well.

- Chatbots and current LLM apps
- Recommendation systems
- Fraud and face detection
- Self-driving assistance

EXISTS TODAY

02

AGI

Artificial General Intelligence

HUMAN-LEVEL

Would learn, reason and transfer knowledge across many different domains.

- Learns unfamiliar tasks
- Uses common sense and context
- Adapts knowledge across fields
- Plans and solves new problems

NOT DEFINITELY ACHIEVED

03

ASI

Artificial Superintelligence

BEYOND HUMAN

Would surpass the best human abilities across nearly every intellectual field.

- Advanced scientific discovery
- Superior strategy and invention
- Exceptionally rapid learning
- Major alignment challenges

HYPOTHETICAL

SPECIFIC-TASK INTELLIGENCE -> HUMAN-LEVEL GENERAL INTELLIGENCE -> BEYOND-HUMAN INTELLIGENCE

Important: Generative AI, AI agents and multimodal AI are capabilities - they are not automatically AGI.
